

FixMyCity App

Problem Statement:

Urban residents frequently encounter public infrastructure issues such as hazardous potholes, malfunctioning streetlights, and burst water pipes that disrupt daily life and compromise safety. However, communities currently lack a centralized, fast, and transparent reporting channel. Without a digital tool to simplify reporting and tracking, these issues often go unreported or are overlooked by authorities, leading to increased risks for commuters and local residents.

Impact :

FixMyCity directly improves public safety by speeding up the repair of dangerous infrastructure like potholes and broken streetlights to prevent accidents. By giving residents a digital tool to monitor their surroundings, the app promotes SDG 11 and encourages a shared responsibility for building sustainable and inclusive urban environments. Furthermore, the use of a ViewModel system creates actionable efficiency by keeping a clear, real-time history of reports so that no community issue is lost or ignored.
